

**Attendance:**

Brenden Mattenson

Maddux Houseman

Adolfo Lopaz Villanueva

**Time:** 11:40-12:40

**Topics discussed:**

- Initial Website has been created
- Everyone attempted to get into website - It did not work, but then it did and the website is now uploaded.
- Outline for mini intro
  - Intro:
    - Our client sees how many cars sit idle at NAU for the whole semester and only go anywhere for weekend trips or to go home at the end of a semester, with only one person per car. The issue we seek to solve with our application is to make carpooling more accessible by giving students a secure forum to communicate with others about their plans for either driving or requesting a ride, to help reduce the cost students have to pay for getting home by carpooling and splitting the cost of gas, as opposed to taking a bus or paying for a whole tank of gas. Another goal is to reduce NAU's carbon footprint by giving students an easy way to carpool and reduce the number of cars needed to get everyone home safely.
- Going over Team standards
  - Going over roles and getting it set up
  - Meeting times and conduct
  - Where are meeting minutes
