

Attendance:

Brenden Mattenson

Maddux Houseman

Adolfo Lopaz Villanueva

Time: 2:15-3:

Topics discussed:

- Notes for each person on the presentation: overall, very good notes, with a few things pointed out
 - Some looked like reading
 - Volume was good
 - Overall practiced
 - Eye contact was good for the most part
- Comments:
 - Slides looked nice and clean
 - Good explanation of pain and how it connects to value/solution
 - Good recognition of other ride-sharing apps
 - Everything makes sense; great job
 - Good problem-solution connection
 - Solid goals for creation and dev plan
 - Solid explanation of risk analysis and challenge
 - Slides were readable
 - Team answered everything well
 - Lots of questions are a good thing
- Suggestions
 - Don't read off slides
 - Improve delivery: not off slides
 - Add more movement and gestures
 - Make sure the audience understands the project is under the CAS system
 - Clarify NAU fees: is it an extra charge
 - Clarify whether it is specifically part of NAU or just accessible through NAU
 - Explain workflow more-Only one comment said this
- For future:
 - Add our roles
 - Add mentor information to the slides
 - Have a little more explanation of the sponsor and the organization we are working for, and why it matters to the client and what they do
 - Current workflow and current transportation options are not mentioned
 - Explain what the solution truly is and what the application will actually do
 - Basic user interaction workflow and explain how students find rides

- Conclusion was a little lacking; give an overall summary to wrap it up, and maybe one line/sentence and explain it. A broad overall explanation of the project. (more time needed)
- Bring in assignments beforehand to go over together and to get suggestions on what needs to be added or whether it is good to go.
