Attendance:

Brenden Mattenson
Maddux Houseman
Adolfo Lopaz Villanueva
Dorian Sanchez

Time: 2:15-

Topics Discussed:

- Explaining why tech draft did not get fully done
    - Illness, schedule complications
- Tech draft feedback:
    - Client information:
        - Who they are and why this is important to them
    - Scope boundaries
        - What we are working on and what we are not working on
    - Give more of a reason for this software to exist
    - Between each section, give one or two sentences to give it more flow:
        - “This is what the section will cover”
    - 3.1
        - Evaluation and recommendations
        - Explain choices made
        - Explain the score in the table
    - 3.2
        - More research to better understand
        - Solution not present
        - Solution integration: intended solution for each individual portion
    - 3.3: created in a daze (sick)
    - 3.4
        - More of a description and a better name
    - Treat the writing as if it is for someone who has no technical knowledge on the subject.
    - Add a risk table to each section
    - Use references to technical documents
    - Very light research no need to go super deep
    - Have a reference page
    - Begin architectural diagram:
        - It will help explain how everything connects in our project and how our solutions will combine.
    - Some informal speech
    - Formatting is good

- Make an architectural diagram and explain how all the challenges come together and if there are any risks when bringing them together
- We can remove the solution integration per section
